2017 QUALIFIED PRODUCTS LIST

Edition 2017-1 (March 15, 2017) Prepared by the: Vermont Agency of Transportation Research and Development Section

The following lists have been extracted from <u>www.nepcoat.org</u>. For the most up to date lists and testing parameters, please refer to lists A and B on this website. The lists are organized as follows:

List A: Three Coat Systems for New or Bare Steel; Inorganic Zinc Rich Primer / Epoxy or Urethane Intermediate / Aliphatic Urethane Finish List B: Three Coat Systems for New or Bare Steel; Organic Zinc Rich Primer / Epoxy or Urethane Intermediate / Aliphatic Urethane Finish

Both lists A and B have been created for new steel or steel cleaned to white/near white quality. Please see section 513 of the "2011 Standard Specifications for Construction" for details. Systems from List A and B may be used for shop applied work, with List A systems generally providing greater performance. For field application, List B is preferred as organic zinc paints have much more forgiving application properties; however List A can also be used so long as there has been sufficient surface preparation and an increased level of care upon application is taken.

Upon the use of any product herein, the Resident Engineer is required to:

- 1. Verify by inspection that the material being incorporated in the project is listed on the current version of the APL. If it is not, the material or product shall be rejected.
- 2. Complete a form TA 556 (Project Materials Acceptance Report). The form **must** include the **exact and full product name and manufacturer**. A copy can be found in Appendix A.
- 3. Mail or email the TA 556 Approved Product List form to the Materials Acceptance Program Certification Unit of the Construction and Materials Bureau.
- 4. The Resident Engineer should keep a copy of form TA 556 for his/her records.

Questions regarding this list should be directed to the Research and Development Section of the Policy, Planning, and Research Bureau at (802) 498-7586 or Email at <u>AOT.ResearchSection@Vermont.gov</u>.

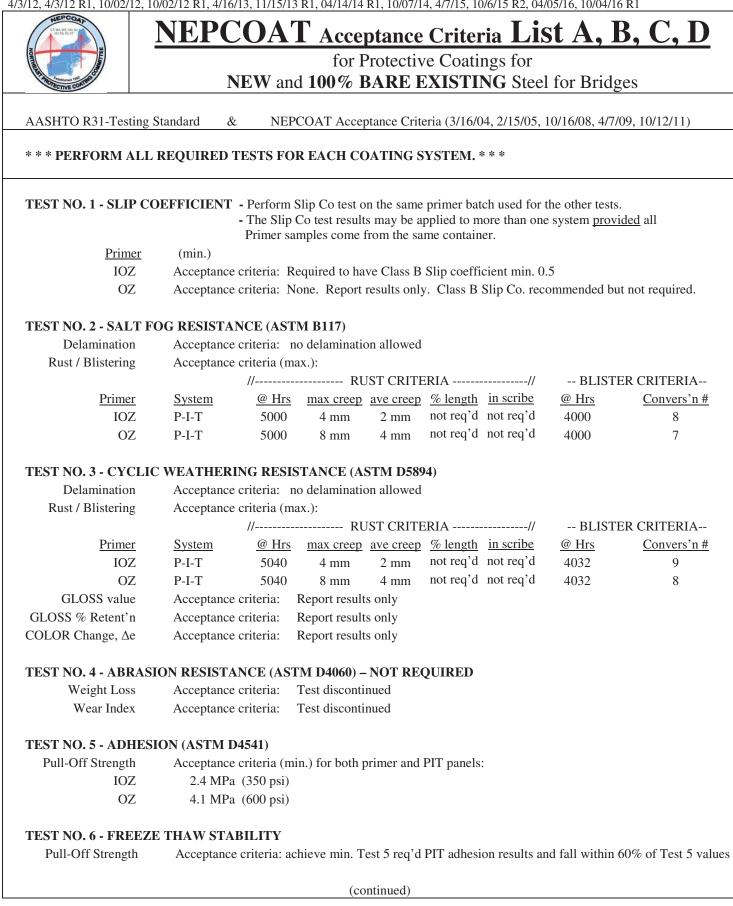

3-15-2017

Emily Parkany, P.E. Research Manager

NEPCOAT Acceptance Criteria List A, B, C, D

for Protective Coatings for

NEW and 100% BARE EXISTING Steel for Bridges

AASHTO R31-09 Testing Standard & NEPCOAT Acceptance Criteria (3/16/04, 2/15/05, 10/16/08, 4/7/09, 10/12/11)

TEST NO. 7 - COATING IDENTIFICATION TESTS

VOCAcceptance criteria:Max. 420 g/L (3.5 lb/gal). Individual state requirements may differ.Coating propertiesAcceptance criteria:Report onlyCoating thicknessAcceptance criteria:A 2-coat system shall be tested and applied at min. total 9 mils DFT.

TEST NO. 8 - ATMOSPHERIC EXPOSURE (TWO YEAR) at outdoor site: - NOT REQUIRED

Acceptance criteria: Test discontinued

ITEM NO. 9 - FIELD HISTORY (TWO YEAR)

Acceptance criteria: (All systems after SSC 06-05) The coating manufacturer shall submit two notifications;

- (1) a startup list within two years of product acceptance identifying five bridges (in a cold/wet climatic region) which have been coated with a minimum of 400 liters (100 gallons) of the coating system (i.e. total volume of primer, intermediate and topcoat); and
- (2) the same list of bridges within four years of product acceptance after the system has two years (min.) of successful field performance. "Successful performance" is simply defined as whether the Owner is satisfied with its application and performance to date, and whether the Owner would recommend the use of the coating again.

PRODUCT VERIFICATION TESTING

AASHTO R-31-09 Appendix X1 recommends that the Owner perform product verification testing for determining if the coatings supplied to a project are the same quality as the manufacturer's materials originally tested and certified for acceptance.

The R-31-09 Test 7- Coating Identification Tests are described in Sect. 9.7 and Appendix X1, and the lab test results are given in NTPEP DataMine (<u>http://data.ntpep.org</u>) along with the manufacturer's listed values.

When the Owner performs verification testing, the following tolerances apply:

Verification Test	R-31-09 Section	<u>R-31-09 App X1</u>	ASTM Test	DataMine Test 7	Tolerance *
Total solids (% by mass)	9.7.9.1	X1.1.1.6	D 2369	Line 2	±5 %
Pigment (% by mass)	9.7.9.5	X1.1.1.8	D 2371	" 3	±5 %
Mass per volume (g/L)	9.7.9.8	X1.1.1.5	D 1475	" 6	±2 %
Viscosity (Stormer)	9.7.9.9	X1.1.1.4	D 562	" 7	±8 %

* The tolerance is applied to the DATAMINE "test result" value (not the manufacturer's "listed value"). These tolerances apply to the primer and intermediate coats each in their mixed condition (not Part A, Part B components). For topcoats, if the color is different from the original color in NTPEP testing, then these tolerances apply to the Owner's verification test values the first time a particular color is used.

Note 1. Test Criteria:Two of three panels must pass for each test to pass. (e.g. Tests 2, 3, 5, 6)Note 2. Materials:NEPCOAT does not accept waterborne coatings for the QPL for use in the Northeast States.

STATE OF VERMONT AGENCY OF TRANSPORTATION CONSTRUCTION & MATERIALS BUREAU Materials Acceptance Program

TA556 Approved Produce List Procedure

Upon the use of a product included on the Approved Product List (APL), the Resident Engineer shall:

- 1. Verify that the material being incorporated in the project is on the APL that is applicable at the time of material installation.
- 2. Complete a TA556 (Approved Product List) form. More than one pay item can be placed on each individual form. Please include the manufacturer and the quantity installed as well as the project (not contract) line number.
- 3. Email to Certification Unit at <u>AOT.MaterialsCertifications@vermont.gov</u>; with a cc to the appropriate Regional Construction office. If necessary the form can be mailed via the USPS to the address below.

Mailing address:

Vermont Agency of Transportation Materials Acceptance Program Certifications Unit 2178 Airport Road, Unit B Berlin, Vermont 05641-8628

4. The Resident Engineer should keep a copy of TA556 (Approved Product List) form for their records.

<u>NOTE</u>: The Approved Products List (APL) is a listing of products and materials that have been tested and/or evaluated and have been deemed satisfactory for use on Agency projects. Materials required to be on the APL do not have certification requirements, therefore material substitutions are not allowed.

However, should a product not be listed that is desired to be used, the manufacturer or distributer can submit a *New Product Submittal Form*, along with materials safety data sheets and any pertinent information necessary to determine acceptable performance. The New Product Submittal Form should be submitted to the Research Engineer in the Research Section. A determination of its use and/or future testing requirements prior to inclusion on the APL will then be made at a meeting of the New Products Committee.
