

2016 (Route Log) AADTs Federal Aid Urban Streets

VERMONT AGENCY OF TRANSPORTATION
HIGHWAY DIVISION
TRAFFIC RESEARCH UNIT

May 2016

METHODOLOGY

The following hierarchy of analysis was used to develop 2016 Average Annual Daily Traffic (AADT) volumes for each of the road segments as depicted on the Vermont Agency of Transportation's "Route Logs":

1. An actual count, if one was available for the particular road segment.
2. An estimated volume based on an actual count taken in a neighboring section used in conjunction with the appropriate turning movement traffic volumes.
3. An estimated volume based on applying the growth rate from a nearby count station to the 2013 AADT.
4. If no counts were taken in the vicinity, the statewide average growth rate for the appropriate class of road was applied to the 2013 AADT.

NOTES

In compliance with the Traffic Monitoring Guide, the following rounding procedures are used in this report for actual and estimated 2016 AADTs:

- If < 1000, then round to the nearest 10.
- If > 1000, then round to the nearest 100.

The AADT volumes listed in this report are calculated to represent a section of a particular roadway. The volumes may differ at either end of the section as a result of a particular type of land use activity or traffic distribution pattern.

The AADT volumes posted with an E (estimated value) are not intended for design purposes.
