Introduction

All agencies that receive federal financial assistance under 49 U.S.C. Chapter 53 and own, operate, or manage capital assets used in the provision of public transportation are required to have a Transit Asset Management (TAM) plan. The plan can be an individual or group plan and needs to be updated every four years. Group plans are designed to present TAM information about smaller subrecipients of 5311 or 5310 grant programs that do not have a direct financial relationship with FTA.

As the Designated Recipient for FTA funds in Vermont, the Vermont Agency of Transportation (VTrans) has determined to meet its responsibility by creating a Group Plan to reduce the burden on individual rural transit agencies. This plan covers 6 of the 7 rural transit agencies in Vermont. It does not include Green Mountain Transit, which is a direct recipient under the Urbanized Area Formula Program, and which has elected to write its own TAMP covering both its urban and rural service areas.

FTA has identified three potential roles in transit asset management planning:

- *Tier I Provider* is a recipient that owns, operates, or manages either (1) one hundred and one (101) or more vehicles in revenue service during peak regular service across all fixed route modes or in any one non-fixed route mode, or (2) rail transit. Tier I providers must develop their own, individual TAM plan.
- **Tier II Provider** is a recipient that owns, operates, or manages (1) one hundred (100) or fewer vehicles in revenue service during peak regular service across all non-rail fixed route modes or in any one non-fixed route mode, (2) a subrecipient under the 5311 Rural Area Formula Program, (3) or any American Indian tribe. Tier II providers can develop their own individual TAM plan or can be included in a group plan developed by a sponsor agency.
- **Sponsor Agency** is a state, a designated recipient, or a direct recipient that develops a group TAM for at least one Tier II provider.

VTrans is the sponsor agency for the six rural transit subrecipients in Vermont all of which qualify as Tier II providers. This TAMP includes both the New Hampshire and Vermont assets of Advance Transit, a bistate provider, but the New Hampshire TAMP includes the financial responsibility of replacing assets funded through New Hampshire DOT.

Goal of this Group Plan

The TAM Plan provides vehicle, facility, and equipment management planning, assigns responsibilities for good stewardship and a state of good repair (SGR) for capital investments in public transit, and ways to measure progress toward these goals.

VTrans asset management practices will focus on determining an SGR through a 'preservation first' principle rather than 'worst first'. This will be implemented through regular preventive maintenance activities and planned rehabilitation where appropriate. VTrans will utilize asset management principles to effectively manage both the physical and financial condition of its assets.

Required TAMP Elements

Group plans require four of the required TAMP elements as shown in Table 1:

TABLE 1: Required TAMP Elements

Element	Sponsor	Participant
Asset Inventory	 Coordinate consolidation Develop/modify database or software Define data collection elements and formats 	 Collect asset data Submit data in format required on scheduled
Condition Assessment	 Define data collection methodology and schedule Manage data (i.e. database/software) Submit data to NTD 	 Support/conduct condition assessment Submit data to sponsor in format required on schedule
Decision Support Tool	 Share guiding policies including weighing or ranking priorities Develop tools Analyze and interpret data 	 Communicate goals and needs Provide information to support tool
Investment Prioritization	 Gather additional data Prioritize projects Generate ranked list of projects 	 Share information on all funding sources with sponsor Share existing Capital Investment Plan Coordinate with sponsor

These elements are further explained below:

- The Asset Inventory must include all capital assets that the provider owns, except equipment with an acquisition value under \$50,000 that is not a service vehicle. The inventory also must include third-party owned or jointly procured exclusive-use maintenance facilities, passenger station facilities, administrative facilities, rolling stock, and guideway infrastructure used by a provider in the provision of public transportation. The asset inventory must be organized at a level of detail commensurate with the level of detail in the provider's program of capital projects.
- The Condition Assessment must generate information in a level of detail sufficient to monitor and predict the performance of the assets and to inform the investment prioritization.
- Decision-support tools are used to estimate capital investment needs over time.
- The prioritization of investments provides guidance for capital planning and budgeting.

Roles and Responsibilities

With oversight from the Vermont Legislature, the Vermont Agency of Transportation (VTrans) is responsible for planning, development, implementation, and maintenance of a variety of transportation infrastructure including, but not limited to, roads, bridges, state-owned railroads, airports, park and ride facilities, bicycle facilities, pedestrian paths, public transportation facilities and services, and Department of Motor Vehicles operations and motor carrier enforcement. VTrans serves the entire population of the State of Vermont.

VTrans has more than 1,300 employees organized in three divisions: Policy, Planning and Intermodal Development; Finance and Administration; and Highway. The Department of Motor Vehicles is also housed within the Agency of Transportation; it has a main office in Montpelier and ten satellite offices statewide.

VTrans interacts with all State agencies and agencies within the United States Department of Transportation, as well as other federal agencies, numerous regional and state governments and international jurisdictions and cross-border organizations, local governments, transit agencies, airports, railroads, and the other private and non-profit entities engaged in transportation-related activities.

Due to the rural nature of Vermont and the size of the subrecipients, many of the elements of the TAM system are handled by VTrans. The majority of funding for the subrecipients, including 80-85% of federal funding and 5-10% of state funding, is made available by VTrans through its budget process. VTrans confers with subrecipients concerning their need for capital investment and accepts requests for the same in the annual competitive grant process. Through an annual competitive grant process, the continuous collaboration between VTrans and each subrecipient to determine the capital investment needs and VTrans ability to flex FHWA dollars into the FTA transit program, the rolling stock is able to maintain a SGR.

Table 2 below lays out the roles and responsibilities of VTrans staff and the Group Plan participants. This collaborative approach reinforces Vermont's commitment to ensure all key stakeholders are involved and on board with the goals and objectives of the TAM Plan.

Element	VTrans	Group Plan Participants
Overarching	Write Group Plan	Support Group Plan
		Executives Approve Group Plan
Annual Target Setting	Coordinate target setting with the participating transit providers'	
Annual Narrative Report	Develop the Annual Narrative Report Submit Narrative to NTD	
NTD Asset Inventory	For those participants that do not report independently, report basic TAM information, including: agency profile; asset inventory; and facility condition assessment	For those participants that report independently to NTD are responsible for reporting basic TAM information, including: agency profile, asset inventory, and facility condition assessment

TABLE 2: Roles and Responsibilities

Asset Categories and Performance Targets

Transit assets included within this plan may be considered in three overall classifications: (1) rolling stock, (2) equipment, and (3) facilities.

Rolling Stock

The majority of this plan focuses on the inventory of transit buses and other vehicles owned or leased by VTrans' subrecipients. VTrans requires the subrecipients to submit rolling stock data for TAM/Program Management purposes twice a year for buses and other vehicles. VTrans uses a Microsoft Access database to track and account for transit rolling stock.

Equipment

Most of the items that qualify as equipment in Vermont are non-revenue vehicles. Other equipment with a value greater than \$50,000 is typically attached to facilities and thus considered part of those facilities. Most of the non-attached equipment falls below the \$50,000 threshold.

Facilities

Transit facilities included in this plan consist of buildings where the transit provider has offices or stores and maintains vehicles. A facility inventory includes items needed to maintain the vehicles in good condition and operating safely. The transit providers send their updated Transit Asset Management Facilities Inventory form to VTrans annually.

Rolling Stock Classifications and Targets

Transit providers in Vermont operate a range of vehicles to meet the needs of the riding public. Classes of vehicles in use in Vermont in addition to non-revenue vehicles are shown below in Table 3. The useful life benchmarks shown in the table are based on those in the FTA Circular 5010.1E. These are somewhat different from those shown in the ULB "Cheat Sheet" which is part of the NTD Asset Inventory Module, and which are the default values in the NTD. VTrans has made some modifications to the benchmarks to reflect actual experience in Vermont.

Vehicle Class	Description	Useful Life Benchmark (ULB)	Useful Miles Benchmark (UMB)
LHDB	Large Heavy Duty Bus (35'-40')	12	500,000
MSMDB	Medium Size Medium Duty Bus (including cutaway vehicles 25'-35')	7	200,000
MSLDB	Medium Size Light Duty Bus (including cutaway vehicles 25'-35')	5	150,000
MVS	Mini-vans and Sedans	6	150,000
MV	Modified Vans	6	150,000
NRA	Non-revenue Automobiles	6	150,000
NRT	Non-revenue Trucks	10	200,000

TABLE 3: Vehicle Classifications

For each asset class, VTrans has developed a list of performance measures and targets (Table 4).

TABLE 4: Performance Measures and Targets

Category	Performance Measure	Target
Rolling Stock (Buses)	Age - % of revenue vehicles within	No more than 20% of
	a particular asset class that have	vehicles beyond their
(Heavy-duty buses and	met or exceeded their Useful Life	useful life and in less than
cutaways)	Benchmark (ULB)	good condition.
Rolling Stock (Autos and Vans)	Age - % of revenue vehicles within	No more than 30% of
	a particular asset class that have	vehicles beyond their
(Sedans, minivans and	met or exceeded their Useful Life	useful life and in less than
modified vans)	Benchmark (ULB)	good condition.
Equipment	Age - % of vehicles that have met	No more than 20% of
	or exceeded their Useful Life	equipment beyond its
(Non-revenue vehicles)	Benchmark (ULB)	useful life and in less than
		good condition.
Facilities	Condition - % of facilities with a	No more than 20% of
	condition rating below 3.0 on a the	facilities in less than good
(All buildings or structures)	FTA Transit Economic	condition.
	Requirements Model (TERM) Scale	

Maintenance Policy

All vehicles and equipment must, at a minimum, be maintained according to manufacturer's maintenance plans. All facilities must be maintained according to the maintenance plan set by original facility developer. For unplanned maintenance needs, VTrans works closely with each transit agency to understand the need for service, adequate maintenance and full warranty access.

To support this process, VTrans has set out the following goals and objectives (Table 5):

TABLE 5: Goals and Objectives

GOALS	Objectives
No more than 20% of all transit	Subgrantees will be required to submit their full vehicle list
buses and 30% of non-bus	with TERM conditions every year. This will coincide with the
vehicles over their established	NTD reporting period ending June 30. A sample inspection of
useful life in less than good (<4)	maintenance records and on-site inspection of vehicles by
condition (TERM)	VTrans or their representatives will take place at least every
	three years.
Facilities will be rehabbed at	Facilities will be inspected no less than every three years.
50% of their useful life	A management plan for each facility will include built in
	update and replacement schedules. A copy will be kept both
	at the facility and at VTrans Public Trans offices.
Equipment over the minimum	A sample of equipment maintenance records will be inspected
financial threshold will be	at a minimum of every three years.
maintained to manufacturers	Equipment maintenance records will be reviewed by VTrans
standards	before funding is granted for replacement

Asset Inventory

Table 6 shows a summary of all of the capital assets owned by VTrans and/or the transit providers in Vermont. (Many vehicles are owned by VTrans and leased by the transit providers.) These figures (and those in Table 9) do not include vehicles operated in New Hampshire by Advance Transit (and purchased with funds from NH DOT). New Hampshire has financial responsibility for those vehicles. Appendix A provides a detailed listing of all rolling stock as well as equipment (service vehicles). Appendix B provides a listing of all facilities. Table 7 shows a more detailed breakdown of rolling stock by provider, including vehicles operated by Advance Transit for its New Hampshire service.

Asset Category/Class	Total Number	Average Age	Average Mileage	Average Replacement Cost/Value	Total Replacement Cost/Value
Revenue Vehicles	225	5.5	104,134	\$183,311	\$41,245,000
AO - Automobile	6	4.6	56,636	\$35,000	\$210,000
BU - Bus	38	6.3	152,603	\$494,211	\$18,780,000
CU - Cutaway Bus	159	5.4	94,661	\$134,434	\$21,375,000
MV - Mini-van	19	5.4	113,665	\$35,000	\$665,000
VN - Van	3	3.4	26,906	\$50,000	\$150,000

Condition Assessment

Condition assessments are performed by each transit provider. During State Management Reviews, VTrans staff may conduct an audit of the condition assessment in order to maintain consistency across the various providers. Every six months, the providers conduct thorough physical assessments of each vehicle including the major components and the exterior of the vehicle, as well as review maintenance records. The providers are instructed to use the TERM rating scale for the condition assessment (see Table 8). As the provider conducts the review and determines the condition rating of the vehicle, they are also strongly encouraged to identify preventative maintenance tasks and small and major repairs (e.g. transmission, engine etc.).

There are situations where the vehicle is past its ULB in age and/or in mileage and yet the vehicle continues to run well, is safe to accommodate the traveling public and there is no major deterioration of the interior or the exterior. In such cases, vehicles may not be replaced strictly according to age or mileage. There are other situations where the condition of a vehicle is marginal or poor before it reaches the ULB for age or mileage. In these cases, VTrans investigates why the vehicle was not able to last as long as it should have according to the benchmarks. Were there unusual operating conditions for the vehicle? Was proper preventive maintenance not performed? A pattern of not meeting ULBs before vehicles need to be replaced may spur a deeper review of maintenance practices.

Condition	Rating	Description
Excellent	5.0 to 4.8	New Asset; no visible defects
Good	4.7 to 4.0	Asset showing minimal signs of wear; some slightly defective or deteriorated components
Adequate	3.9 to 3.0	Asset has reached its mid-life; some moderately defective or deteriorated components
Marginal	2.9 to 2.0	Asset reaching or just past the end of its useful life; increasing number of defective or deteriorated component(s) and increasing maintenance needed

TABLE 8: TERM Rating Scale

Poor	1.9 to 1.0	Asset is past its useful life and is in need of immediate repair
		or replacement may have critically damaged component(s)

Table 9 below provides a summary of the condition assessment for all of transit capital assets in Vermont. The listings of individual assets in appendices A and B show the condition rating for each asset.

TABLE 9: Condition Assessment

Asset Category/Class	Total Number	Avg Age	Average Mileage	Average Replacement Cost/Value	% At or Exceeds ULB	Facilities less than 3 on TERM Scale
Revenue Vehicles	225	5.5	104,134	\$183,311	40%	N/A
AO - Automobile	6	4.6	56,636	\$35,000	33%	N/A
BU - Bus	38	6.3	152,603	\$494,211	5%	N/A
CU - Cutaway Bus	159	5.4	94,661	\$134,434	46%	N/A
MV - Mini-van	19	5.4	113,665	\$35,000	56%	N/A
VN - Van	3	3.4	26,906	\$50,000	33%	N/A
Equipment	8	9	23,135	\$35,000	50%	N/A
Non Revenue/Service Automobile	2	2.9	20,578	\$35,000	0%	N/A
Other Rubber Tire Vehicles	6	11.1	24,371	\$35,000	67%	N/A
Facilities	11	30	N/A	\$3,311,323	N/A	18%
Maintenance	4	22	N/A	\$2,330,625	N/A	25%
Combined Admin/Maint	4	14	N/A	\$5,414,514	N/A	0%
Administrative	3	61	N/A	\$1,681,333	N/A	33%

Decision Support Tools

VTrans maintains an Access database with all of the relevant information for each asset. Providers submit updated information on each asset twice a year to VTrans (December 31 and June 30). VTrans is in the process of implementing a more robust asset management database called VAMIS, and once that is up and running (sometime during FY2023), the transit assets in the Access database will be transferred into VAMIS. VAMIS is intended to have additional reporting and analysis tools which will assist the Public Transit section of VTrans to plan and prioritize capital investments. It will also have a public-facing portal to provide information on transportation assets to any interested parties.

Enhancing the quality of data in the system and performing additional analysis will allow VTrans to identify patterns of over- or underperformance with regard to meeting ULBs and maintaining assets in good condition or better. Agencies can be rewarded for superior maintenance performance and remedial actions can be taken for those agencies whose assets deteriorate more quickly than expected.

As mentioned earlier, VTrans and its subrecipients continue to use the Federal Transit Economic Requirements Model (TERM) in assessing the condition of their assets. When applied consistently across providers, this tool assists VTrans in allocating capital funds most efficiently. VTrans works with providers during State Management Reviews to refine and standardize the condition assessment process.

As part of the process in developing this TAM Plan, VTrans prepared a Facility Condition Inspection form for the use of the transit providers to allow for condition assessments to be made on a comprehensive and consistent basis. This form is shown in Appendix C.

Investment Prioritization

Age, mileage and condition all factor into decisions about investments into repair, rehabilitation or replacement of assets. VTrans does not have a strict formula but rather works with the transit providers in good faith toward maintaining adequate fleets and facilities to maximize reliability and safety for the traveling public. Other factors that are considered include the purpose of the vehicle: serving commuters to work, providing access to medical care for the elderly, the desire for economic investment by the management and politicians as well as good customer service. Overall investment is controlled by the availability of funds and the goals of the Governor and VTrans management as well as the goals in statute.

Major investments can include overhauls, or disposal and replacement. Details on these strategies are provided below.

Overhaul Strategy

- Rolling Stock overhaul of rolling stock is considered mostly for large heavy-duty buses (30 feet and longer) at mid-life. Due to the harsh conditions in Vermont, this is not always a good return on investment particularly considering the improvements in technology and the cost of mid-life overhauls.
- Equipment As needed
- Facilities As determined by planning document which justifies internal cost estimate

Disposal Strategy

- Rolling Stock see below
- Equipment equipment is usually disposed of by soliciting bids if remaining value is determined to exist.
- Facilities facilities are disposed of when they are no longer needed for transit purposes

Several factors affect the disposal of rolling stock. Transit providers must maintain an adequate fleet to be able to operate scheduled service reliably. According to FTA rules, that means maintaining a spare ratio of up to 20% of the peak vehicle requirement. The "spare" vehicles are typically those near the end of their useful life and typically are considered part of the active fleet. Agencies may also maintain a limited "emergency contingency" fleet of inactive vehicles for rare cases when there are not enough active vehicles to operate the scheduled service. Normally, these inactive vehicles are slated for disposal at the next ready opportunity.

The State maintains an auction site which is available to all of the transit providers. The State auctions off vehicles in operable condition twice per year. Other than driving the vehicles to the auction location, no further action is needed on the part of the transit providers to dispose of the vehicles. Because of the limited number of auctions per year, a vehicle may be on inactive status for up to six months.

If a vehicle is inoperable, the transit provider must find an alternative means of disposal. This normally requires two independent appraisals of the value of the vehicle, which can be expensive and timeconsuming to obtain. Thus, transit providers are generally encouraged to dispose of their vehicles prior to the point at which they are no longer roadworthy. It is not always possible to coordinate vehicle replacements with a measured deterioration of vehicle condition, as sometimes an older vehicle can suddenly experience a major failure. VTrans works with the providers to the extent possible to forecast vehicle replacements and implement them in a timely way, while still recognizing that there is not enough capital funding available to meet all vehicle replacement requests.

Table 10 below shows proposed projects for the next five years for each of VTrans' subrecipients. These include rolling stock purchases, service vehicles and other equipment, and facility construction and major upgrades. Each project has a priority level and an estimated total capital cost. Capital items that are not physical assets (such as software) are not included in the list, nor are regular maintenance activities or replacement of facility components (such as an HVAC system or a roof).

Project Name	Project Year	Asset Category	Asset Class	Cost	Priority	Updated Date
Two 35' electric buses	2023	Revenue vehicles	BU	\$1,800,000	High	6/30/22
Electric Bus Charging Infrastructure	2023	Equipment	Custom cat.	\$800,000	High	6/30/22

	• Lighting & branch wiring (interior and exterior)	
	Communications & security	
	Other electrical system-related pieces such as lightning	
	protection, generators, and emergency lighting	
Equipment*	Equipment related to the function of the facility, including	
Equipment	maintenance or vehicle service equipment – does not include	
	supplies	
Site	Roadways/driveways and associated signage, markings, and	
	equipment • Parking lots and associated signage, markings, and	
	equipment • Pedestrian areas and associated signage, markings, and	
	and equipment • Site development such as fences, walls, and	
	miscellaneous structures • Landscaping and irrigation • Site	
	utilities	
	Total Score	

* Agencies may choose to include equipment assets as an administrative and maintenance facilities asset or inventory the equipment in their TAM Plan in the Equipment asset category. Equipment valued between \$10,000 and \$50,000 may be rated in a facility. If equipment is valued at \$50,000 or more, or is a piece of equipment you would inventory separately in your TAM Plan, it may not be rated in a facility.

Rank	Category	Description
5.00	New/Excellent	No visible defects, new or near new condition, may still be under warranty if
		applicable
4.00	Good	Good condition, but no longer new, may be slightly defective or deteriorated, but is
		overall functional
3.00	Adequate	Moderately deteriorated or defective ; but has not exceeded useful life
2.00	Marginal	Defective or deteriorated in need of replacement; exceeded useful life
1.00	Poor	Critically damaged or in need of immediate repair; well past useful life

RE: Transit Asset Plan Opt-out Letter

Dear Mr. Currier,

Please accept this written notification that pursuant to 49 CFR part 625.27 (b)(2), and as a Tier II provider, GMT chose to opt-out of the 2022 Vermont Agency of Transportation group TAM plan.

GMT developed its own 2022 TAM plan update that was approved by the GMT Board of Commissioners today. This plan update can be provided to the AOT upon request.

Please let me know if you have any questions or if you need anything else from GMT on this matter.

Sincerely,

Jon Moore General Manager 802-540-2527 jmoore@ridegmt.com
